TOL-0005 - Stone details

Pink, blue, green, yellow and orange flecks shift across the broad face of this 8.05 ct Queensland boulder opal. Its freeform pear outline retains the natural ironstone host around and behind the color-bearing opal.

Queensland boulder opal with natural ironstone host. Semi-translucent.

Weight and measurements

Scale photographs read 8.050 and 8.045 ct on separate weighings; listed as approximately 8.05 ct. Approx. 16 x 13 x 6 mm (length x width x thickness), read from caliper photographs and rounded to whole millimeters. Have a jeweler measure the actual stone before making a setting.

Condition

The pale diagonal feature is a stable natural formation, possibly an inclusion, not a crack, as confirmed by the cutter. The brown material is natural ironstone host matrix.

Purchase and cutting history

Purchased in the rough from Broken River Mining at the Kino gem show, Tucson, then cut by The Opal Ledger. These are our firsthand purchase and cutting declarations. No laboratory report accompanies the stone.

Viewing record

Photographs and silent video show this exact stone. Color changes with light, viewing angle, camera and display. Loose stone only.
